

Adult Orthodontic Smile Enhancement in Six Months

Many adults are unhappy with the appearance of their smiles. Crooked teeth make many people feel self-conscious, reserved, or even ashamed of their appearance. It impacts their relationships and careers in more ways than they can imagine.

Adults avoid orthodontic treatment because it can take up to 3 years to complete the treatment and they are concerned about having a mouth full of metal braces. Veneers can be done within just two appointments but usually involves removal of tooth structure, and many patients are worried that veneers may chip or break. Veneers can also be expensive.

For those wanting an attractive, pleasant smile, Six Month Smiles™ is a great option. This technique uses tooth-colored braces to gently straighten teeth in an average time of just 6 months.

Six Month Smiles™ uses standard orthodontic mechanics, but with an emphasis on the cosmetic appearance of your teeth. The treatment can be used to treat a wide variety of orthodontic complaints, including: crowding (teeth are too close together), spacing (teeth have gaps), and overjet (front teeth stick out).

Hema Gopal, DMD

For those wanting an attractive, pleasant smile, Six Month Smiles™ is a great option.

The cost of treatment using Six Month Smiles™ system is less than conventional orthodontic treatment or Invisalign™ or veneers. ■

For more information about this treatment, or other ways to care for your teeth, call Dr. Gopal's office, Premier Dental, at (609) 298-1124, or visit their web site: www.BordentownDentist.com.
